SERIE HD MODEL KR/TK | WITH MECHANICAL SEAL

PG 1.2 CHEMICAL NORM CENTRIFUGAL PUMPS

APPLICATIONS

For all transport or circulation duties of corrosive liquids, even high viscosity, with maximum efficiency.

This series of pumps is equipped with a state of the art semi-open impeller with pressure release.

It is fixed onto the shaft independent from the direction of rotation.

As from type 100-250 and above, a closed impeller for higher efficiency is standard.

MATERIALS

Standard is the material PPH that covers a very wide range of duties.

For highly abrasive liquids (high % of solids), at special order, impellers or housing parts of High modulus PE are available.

For highly corrosive mixtures at higher temperatures even a pump entirely made of PVDF or virgin PTFE is available.

TECHNICAL DETAILS PUMPS

Design pressure	PN10 at 20 °C
Design standard	DIN 24.256 - EN 22585 - ISO 2858
Max. system pressure	2.5 Bar with standard seal, 10 Bar optional
Min. flow	3 m3/h
Max. flow	600 m3/h
Max. head	90 m
Max. viscosity	250 mPas
Max. solid size	3 mm

TECHNICAL DETAILS MOTORS

Standard	Three-phase, multivoltage, TEFC
High efficiency	IE2 efficiency level acc. IEC60034-30
Duty	Continuous duty: S1
Multi Voltage up to IEC100	220-240/380-415V 50 Hz // 440-460 V 60 Hz
Multi Voltage above IEC100	380-415V/ 660V 50 Hz // 440-460 V 60 Hz
Protection class	IP55 (IEC 34-5/ NEN-EN 60034-5)
Insulation Class	"F" ($\Delta T=80^{\circ}\text{C}$);
Max. ambient temperature	Ambient temperature: -30 to 40 °C, at 1000 m.a.s.l.
Max. relative humidity	< 95%

OPTIONAL AVAILABLE

Other voltages	f.i. 480 V/ 3 Ph/ 60 Hz
Other insulation	f.i. Tropicalized
PTC Thermistors	on windings
Thermal or dust protection:	IP56, IP65, IP66, IPW56, IPW65 or IPW66

CONSTRUCTION

DETAILS POS. 300 BEARING ASSEMBLIES

ARBO offers two different methods of lubrication:

GREASE

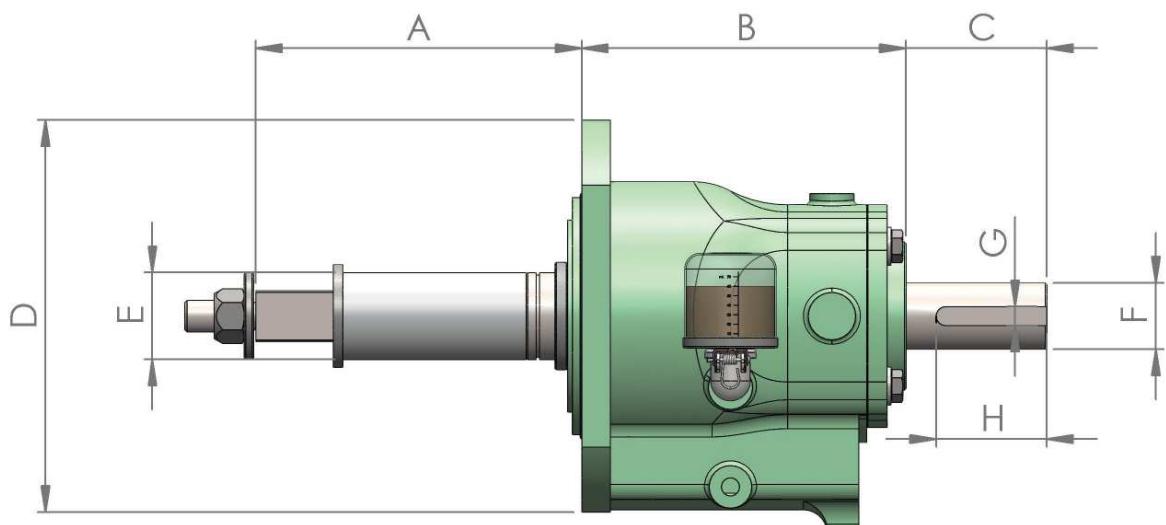

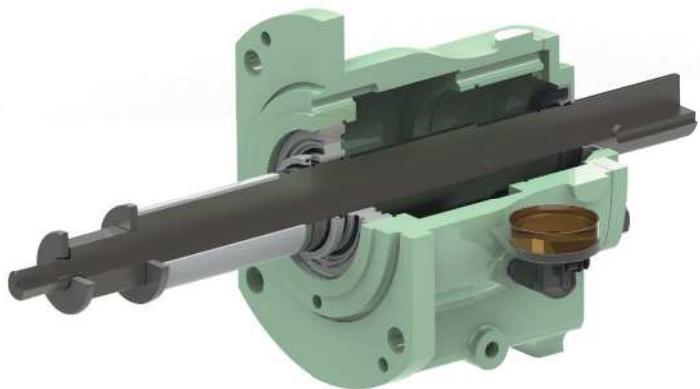

The use of grease is primarily limited to lower motor power pumps where the parameters are in the size and speed range of rolling element bearings. To prevent the loss of grease, oil seal rings are used.

OIL BATH

A common form of bearing lubrication is direct contact. As the shaft rotates, the rolling elements in the bearing make contact with a level of oil. This rigid cast iron bearing housing comes complete with constant level oiler, large filler and drain plug.

BEARINGS

- double row angular contact bearing
- deep groove roller bearing
- easy to replace
- exact alignment

DETAILS POS. 400 SINGLE MECHANICAL SEAL

ARBO Pompen en Filters B.V. have a long history in seal designing. Since all our applications are corrosive of nature, there are exclusively high performance plastics or silicon carbide parts in the liquid zone.

ARBO's standard seal is a single, internal flushed rotating shaft seal.

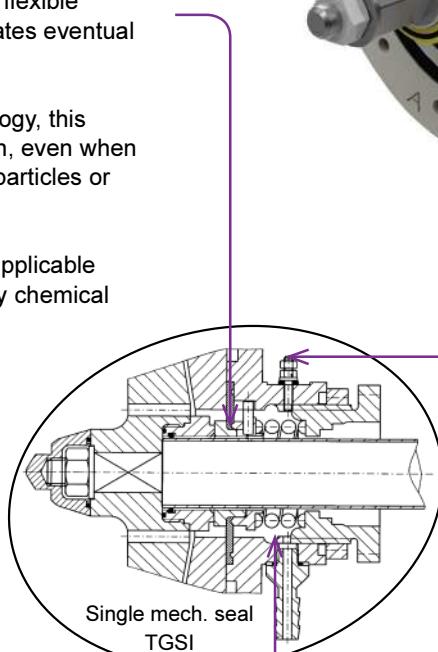

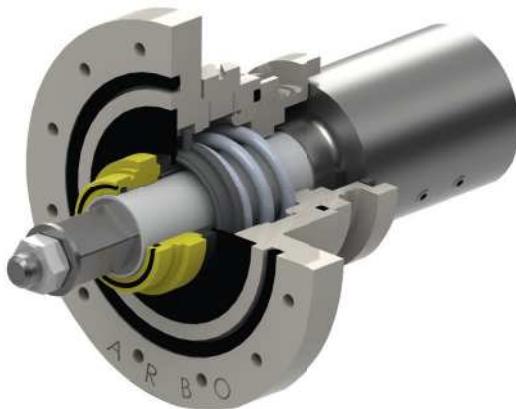

The static seal ring is mounted in a flexible diaphragm or O-ring that compensates eventual pressure waves.

Thanks to the low pressure technology, this type of seal has a very long lifespan, even when pumping liquids that contain small particles or crystals.

The beauty of this seal is that it is applicable to roughly 80% of all our heavy duty chemical applications.

The maximum system pressure (on standstill) is 2 Bar and is re-adjustable to compensate for eventual wear.

For a system pressure of maximum 10 Bar, our unique Bellows seal made of PEEK is available.

STANDARD SAFETY FEATURE

Connectors for seal leakage that may be connected to your control system.

The pressure element ensures the optimum shaft sealing and is located outside the liquid zone.

*An external flush is needed for these types!

DETAILS POS. 400 DOUBLE MECHANICAL SEAL

For all of the TK-HD versions and for close coupled above the KR-100-250-HD versions, a double seal with flush is available.

Typical applications for the double seal are for media:

- that have a solid particle content above 10% by weight
- that may crystallise during operation or during stand still
- contain very tiny particles
- < 10 micron that may damage the single seal surfaces

Please take notice that in order to have sufficient space to adapt the double seal, the types TK-65-160 to 50-200 need to be equipped with bearing assembly No. 32 instead of standardised type No. 24.

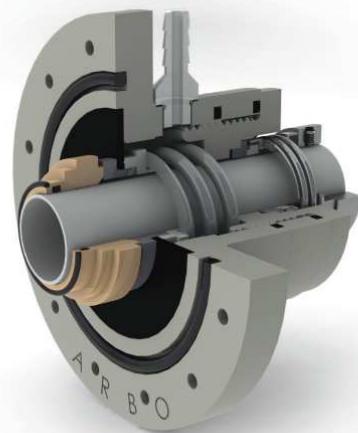

Like with the single seal types we offer a low and high pressure version.

The low pressure version (< 1 Bar) is used for all applications where a normal flooded suction is available without system pressures.

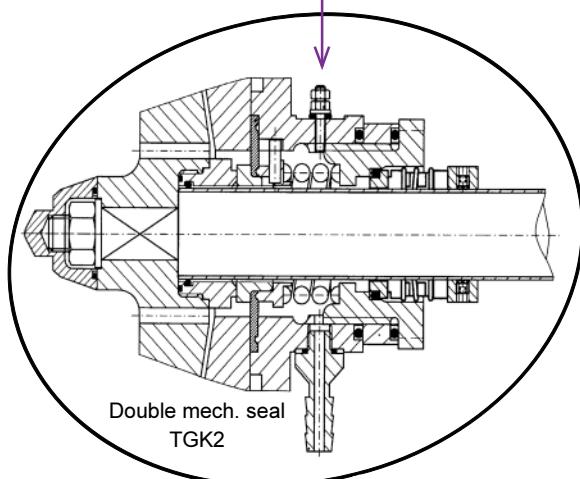

Again there are zero metal parts in the flush chamber and can therefore be considered 100% corrosion resistant; an advantage when wear in the front seal may contaminate the flushing liquid.

As flushing liquid normal clear water may be used or an external flushing liquid unit can be delivered to provide one or more pumps in a closed circuit with only a very tiny water consumption.

The high pressure type is mounted in the seal box and can withstand 10 Bar, ideal when normal water pressure or other supply is used.

STANDARD SAFETY FEATURE
 Connectors for liquid seal detection to be connected to your control system.

LIQUID SEAL MONITORS

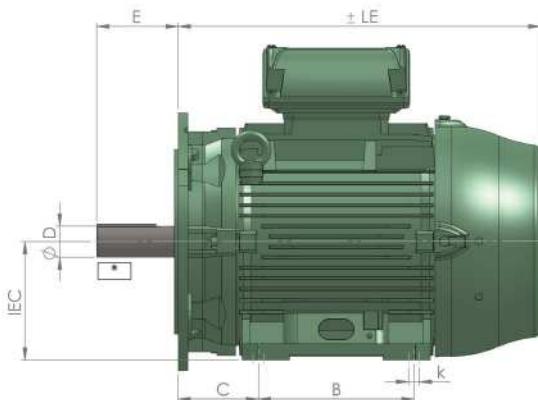

In order to adjust flow rate and pressure, we advise to install Liquid seal monitors.

These devices can be mounted to the pump units in order to adjust and monitor the correct flow and pressure of the flushing liquid.

POS. 842 SPACER COUPLINGS
FEATURES

- Light weight spacer body
- Practically no downtime or maintenance cost
- Fully machined flanges and spacer body
- Phosphatised metal parts
- Interchangeable coupling parts
- Easy (dis)-assembly
- Dynamic balancing not required
- Permits straight edge alignment
- No lubrication required
- Assembly is spark proof

ARBO baseplates no. 4 and 6 are manufactured of Glass Fibre Reinforced plastic (GRP).

These belong to the highest chemical standard in the market. Thanks to a rigid steel core, the stability of these plates is outstanding. Even after heavy transport, minor alignment issues will occur.

The larger baseplates are made of steel with a highly corrosion resistant powder coating.

POS. 890 BASEMENTS ACC. DIN24.259 FOR HD MODEL KR

For the close coupled series (model KR), that do not require precise alignment, ARBO offers lightweight and cost attractive baseplates.

The major advantage of using a baseplate are that pump and/or motor foot is not in direct contact with the floor. Especially on factory floors there may be chemical spills that will normally cause corrosion to the metal parts.

By placing a corrosion resistant baseplate, the setup will last longer, look better and eventually save cost!

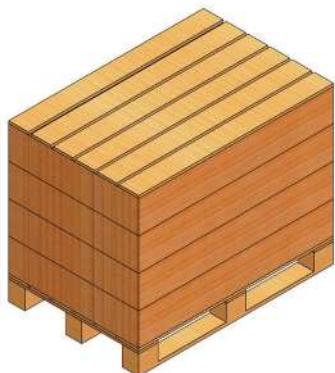

It is also a professional method to combine a priming vessel or suction strainer together with a pump to one ready to install set.

COMPACT SERIES SEALPRO MODEL KR UP TO 50 M3/H

This series is close-coupled. The pump is mounted directly to the motor flange by means of a plastic bracket. This compact execution is perfectly suited as stationary pump or for use in machines.

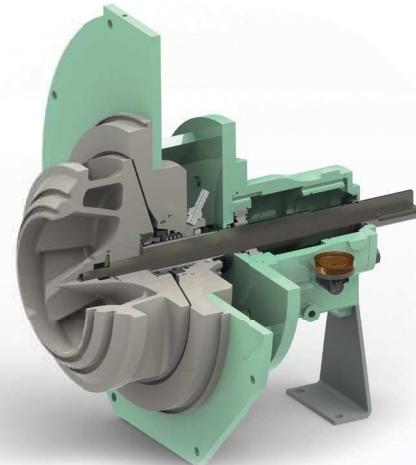

COMPACT SERIES CHEMICAL STANDARD HD MODEL KR UP TO 600 M3/H

Again this series is close-coupled, but the bracket is made of metal for maximum stability. This compact execution, thanks to a reduced number of wear parts compared with conventional long-coupled pumps, requires less maintenance and related expenses. It is optional available in a vertical execution Model KRV.

LONG COUPLED SERIES CHEMICAL STANDARD HD MODEL TK UP TO 600 M3/H

This configuration consists of a bare shaft pump, fully assembled with a standard motor and flexible coupling on a normalized glass fiber-reinforced polyester base plate according DIN 24.259. Thanks to the design according to the "back pull out" system, the total mechanical part of the pump can be removed without disassembling the piping or motor. Therefore it is easy to open the pump for cleaning, inspection or maintenance. The alignment is not disturbed and no unnecessary work or costs is created.

CHEMICAL PUMPS

- For all applications where metal pumps suffer from corrosion.
- Interchangeable with metal pumps thanks to normalized connections.
- Machined completely from solid blocks of plastic.
- No injection molding or welding involved – no chemical cracking!
- No metal parts in the liquid – extremely corrosion resistant.
- The highest chemical resistance. Close (KR) and long (TK) coupled configurations.
- Horizontal or vertical mounting. Special configurations for abrasive liquids.
- For plastic pumps unique new hydraulic
 - Very smooth operation and low noise level.
 - Increased efficiency
 - Lower NPSH_r – improved suction capabilities.
 - reduced clogging.
 - Direction independent impeller fixation.
 - Particles up to Ø 3 mm without damage.
 - Flow rates (Q) up to 600 m³/h.
 - Flow rates (h) up to 90 m.
